

1. A delivery unit that is mounted in a fuel tank, with a fuel pump arranged in a baffle and with an ejector for delivering fuel into the baffle, a mixing tube of the ejector being arranged essentially vertically, characterized in that a deviation (11, 19) for guiding the fuel delivered by the ejector (8, 17) into the baffle (4, 16) is arranged at the outlet of the mixing tube (10, 20) of the ejector (8, 17).

2. The delivery unit as claimed in claim 1, characterized in that the deviation (11, 19) has a curve (15, 21), one partial region of the curve (15, 21) covering the opening of the mixing tube (10, 20) and another partial region being arranged above the baffle (4, 16).

3. The delivery unit as claimed in claim 1 or 2, characterized in that the deviation (11) has two curves (15) adjacent to each other, the curves (15) in their regions adjacent to each other being arranged above the mixing tube (10) and the free ends of the curves (15) protruding laterally over the mixing tube (10).

4. The delivery unit as claimed in at least one of the preceding claims, characterized in that the deviation (19) is arranged on the baffle (16).

5. The delivery unit as claimed in at least one of the preceding claims, characterized in that the deviation (11) is arranged on the fuel pump (5).

6. The delivery unit as claimed in at least one of the preceding claims, characterized in that the deviation (19) is designed as a separate component which is to be fastened to the fuel pump or to the baffle (16).

7. The delivery unit as claimed in at least one of the preceding claims, characterized in that the deviation (11) forms a constructional unit with a component (cover 13) of the fuel pump (5).

8. The delivery unit as claimed in at least one of the preceding claims, characterized in that the deviation (11) is manufactured in one piece with a component (cover 13) of the fuel pump (5).

9. The delivery unit as claimed in at least one of the preceding claims, characterized in that the mixing tube (20) of the ejector (17) is designed together with the delivery pump (18) as a constructional unit which can be preassembled.
